Adobe Web Collection contains four tools

The screenshot shows the Adobe Web Collection website. A black arrow points from the text 'Adobe Web Collection contains four tools' to the 'What's Included' section. The 'What's Included' section lists the following tools:

- Adobe GoLive
- Adobe Photoshop
- Adobe Illustrator
- Adobe Dreamweaver

Below this list, there is a 'More Information' section with links to 'Press releases', 'Web Collection overview', and 'Product brochure (PDF, 522 KB / 6 pages)'. There is also a 'Resources' section with links to 'Contact', 'Tutorials', 'Guides', 'Screenshots', 'Downloads for GoLive', and 'Download resources'. At the bottom of the 'Resources' section, it says 'Find the right partner by searching the AEM Partner Resource Directory'.

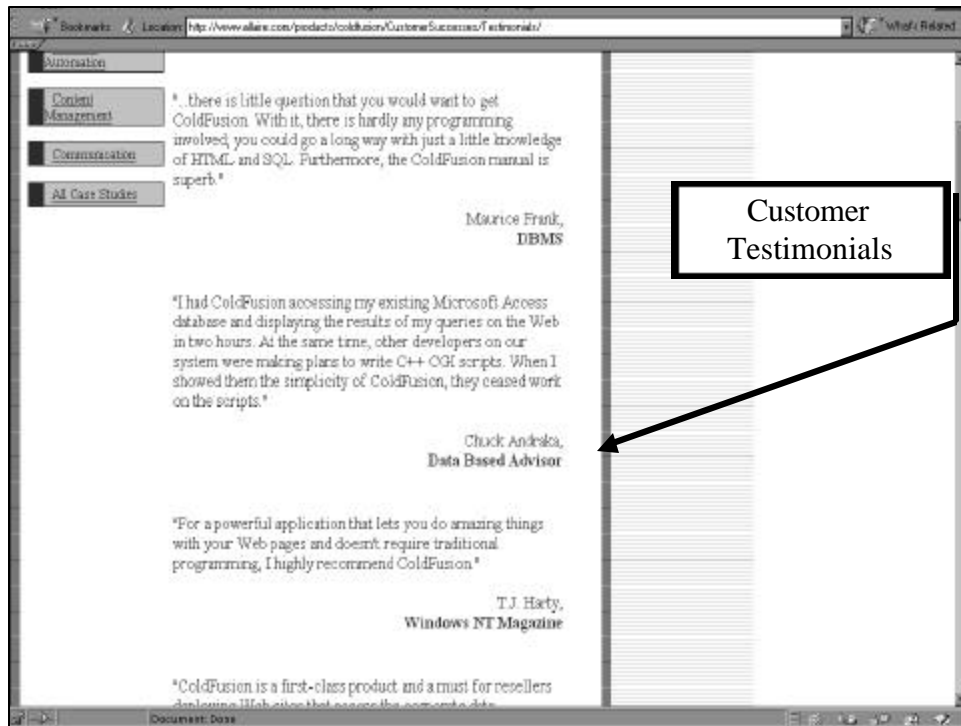

The 'Key Benefits' section on the right lists three main benefits:

- Superb creative control:** With four powerful Web design and production tools, the Adobe Web Collection is everything you need to design, edit, and maintain a premium Web site. Visually lay out sophisticated, data-driven Web pages with Adobe GoLive 5.0. Use the industry-standard image editor, Adobe Photoshop 8.0, to create and optimize high-quality images. Add impact with Adobe Illustrator, the professional solution for Web graphics and animation. Create high-quality vector graphics in Web-optimized formats with Adobe Illustrator 8.0. If you're looking for a professional Web publishing solution to create dynamic, graphically rich Web sites that attract and retain customer attention, the Adobe Web Collection is everything you need.
- Predictive workflow:** Accomplish all of your Web design, production, and management tasks fast with one integrated tool kit. From image processing and cross-browser layout to site management and reporting statistics, the Adobe Web Collection lets you seamlessly move between tasks and applications with an intuitive, integrated workflow. Common commands, tools, palettes, and keyboard shortcuts ensure that you get started quickly and maximize productivity. And on-call customer support means fast, hassle-free answers for novice and expert users alike.

Easily Manage and Update Your Internet or Team Intranet Sites

4 of 6

Microsoft FrontPage® 2000 makes it a breeze to update your Web and monitor your site's. Enhanced collaboration features make working together on Web content easier than ever.

Monitor your site with different views

Manage Your Site More Easily and Efficiently with FrontPage 2000 Views

Page View. Start creating and editing Web content immediately. Page View combines the FrontPage Editor and FrontPage Explorer, which ran in separate windows in previous versions of FrontPage.

Folders View. Use this view to see all of the pages, graphics, and files in your Web, and effortlessly move or rename pages.

Reports View. Thirteen Web reports help you find, diagnose and fix potential problems. These reports can tell you the total size of your site, number of pages, unlinked files, slow pages, recently added pages, broken hyperlinks and more.

Navigation View. Easily organize your site, create new pages, and set up how your pages link to one another.

Hyperlinks View. Quickly identify all hyperlinks, including broken hyperlinks and linked Microsoft Office documents.

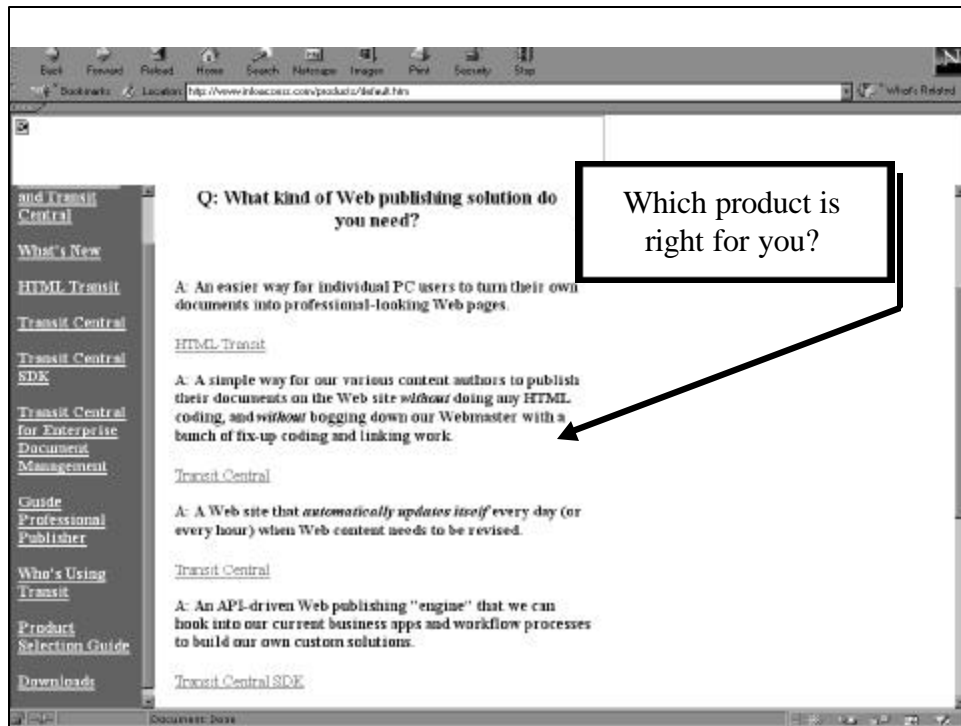

Tasks View. Track Web tasks by status, description, who they are assigned to, and priority.

Use Reports View and 13 Pre-Built Summary Reports to Diagnose and Fix Potential Problems

Quickly and easily perform common site-management tasks with the Summary Reports site-at-a-glance capabilities. For example, use the **Broken Hyperlinks** report to find links that need fixing, and the **Slow Pages** report to locate

www.infoaccess.com

- HTML Transit
 - No need to understand HTML
 - Most useful if you want to create a web version of company manuals or handbooks

www.incontext.com

- Incontext Web Analyzer 2.0
 - Checks sites for broken links, missing images, duplicated files, and other problems
 - Option to schedule your analysis automatically
 - Customizable to fix errors while you analyze
