Overview

- Perspectives and Definition
- Driving forces
 - Roots
 - Key forces
 - Peripheral forces
- Electronic business transactions
- The current technologies
 - The Internet and World Wide Web
 - Client server systems
 - Smart software

Perspectives on E-Business

- E-Business is a new and evolving field
- It may be examined from a variety of perspectives
 - Business: efficient business management
 - Technology: transformed and new processes
 - Economic: new markets and mechanisms
 - Cultural: new behaviors and expectations

September 28, 2001

Roots of E-Business

3

Electronic Commerce Kalakota and Whinston

- The delivery of information and services by electronic means
- The application of technology to business transactions and workflow
- Tools to cut the cost of, and improve the quality of, services
- The buying and selling of products and information on the internet

September 28, 2001

Roots of E-Business

4

Electronic Business

- A business where selected business processes are transformed using computer and network technologies.
- The targets of opportunity are:
 - New channels for products
 - New efficiencies in product and workflow management
 - New capabilities in customer and document management
 - New opportunities for organizational structuring -- process reengineering and knowledge management.

Roots of E-Business

5

E-Business Roots, Trunk, & Branches

September 28, 2001

Roots of E-Business

6

Roots of E-Business

- Darpanet
 - Unix/Sockets, IP, TCP, and FTP
- The Xerox Star
 - Ethernet, GUI (Mouse, Icons & Windows), Laser printer
- The IBM PC
 - Commodity computing

September 28, 2001

Roots of E-Business

7

Trunk of E-Business

- Atoms versus Bits
 - The economics of bits
- E-markets
 - Immediacy and Scalability
 - Disintermediation
- Fourth Wave
 - Upside down processes

September 28, 2001

Roots of E-Business

8

Branches

- Information and Informating
- Reengineering and Knowledge
- Calculation and Communication
- Social Periphery and Social Capital
- Ubiquitous Computing and Idiot Savants

September 28, 2001

Roots of E-Business

9

A Conceptual Framework "Informating"

In the Age of the Smart Machine

Shoshanna Zuboff

- Power technology and work – automation
- Computer technology and work – information
- Learning from Fredrick Taylor
- Blauner's U-curve of technology integration

September 28, 2001

Roots of E-Business

10

Blauner's Hypothesis

September 28, 2001

Roots of E-Business

11

A Conceptual Framework Reengineering & Knowledge

- **Business Process Reengineering**
 - Focus on core processes
 - Utilize IT to eliminate routing delays
 - Triage cases to automate the process
 - Turn typical cases over to logic
 - Provide access to needed information for complex cases
 - Retrain practitioners to handle exceptions
- **Knowledge Management**
 - Lateral information may be lost in the process
 - KM involves discovering what an organization knows

September 28, 2001

Roots of E-Business

12

A Conceptual Framework Beyond Calculation

- The origin of computing focused on their ability to perform repetitive calculation
- Increasingly computers are being used for communication and connection
- The next 50 years of computing will focus on enhanced communications capability and agents
- Moore's law and the PC of 2044 – 2^{64}

September 28, 2001

Roots of E-Business

13

A Conceptual Framework Computing on the Periphery

- Much of what transpires in the workplace involves social interaction
- With core processes complete, we are looking to accommodate the need for social information in the process
- Organizations must pay attention to:
 - Physical capital
 - Intellectual capital
 - Social capital

September 28, 2001

Roots of E-Business

14

A Conceptual Framework Ubiquitous Computing

- Information appliances are devices capable of communicating over a network
- The Negroponte flop
- Sensors, virtual machines, and micro actuators are creating the potential for ad hoc networks
 - Cars will recognize neighborhoods
 - Doors will recognize authorized inhabitants
 - Classrooms will recognize teachers

September 28, 2001

Roots of E-Business

15

E-Business Evolving Technologies

- E-Business is not new. It is the evolutionary and revolutionary culmination of a century of technological innovation.
 - The telephone, telegraph, and telex added a first order change in the speed of transactions and the immediacy of management
 - The optical copier and laser printer added a first order change in the cost and ease of information sharing
 - The fax, email, online calendaring, file servers, shared document spaces, and intranets extended this change

September 28, 2001

Roots of E-Business

16

E-Business Transaction Evolution

- Mail Order
- Phone and fax orders with COD
- Phone, fax, and e-mail orders using credit cards
Fax and e-mail promotions
- Web enabled transactions
 - Product information
 - Inventory information
 - Online orders
 - Order tracking
 - Customer service

Roots of E-Business

19

E-Business Technology: Today

- Business at the current time is driven by three key developments in technology
 - The Internet – which allows for a global marketplace.
 - Browsers – which provide an understood application program that make the global marketplace accessible
 - Client server systems – which allow programs of increased the flexibility and scalability.
 - “Intelligent” software – which increasingly include complex business rules that help level the playing field for businesses.

September 28, 2001

Roots of E-Business

20

The Internet

- The Internet is simply an interconnected network of networks defined in large part by standards:
 - Local Area Network(LAN), Network Interface Card(NIC), and Medium Access Control(MAC) address standards allow messages to move from machine to machine on a simple network.
 - Internet Protocol(IP) and Domain Name Service (DNS) standards allow messages to be passed between networks connected by routers.
 - The Transmission Control Protocol standard provides a means to insure the integrity of messages that are sent.

September 28, 2001

Roots of E-Business

21

The Internet (Continued)

- Once the networks were connected and people agreed to use that singular network, application protocols could be developed:
 - The Simple Mail Transfer Protocol (SMTP) and subsequently POP, POP3, IMAP, MIME, etc. allows mail to be exchanged
 - The File Transfer Protocol (FTP) allows file exchange
 - The HyperText Transfer Protocol (HTTP) coupled with the HTML standard and the Universal Resource Locator (URL) standard allowed the development of the World Wide Web.

September 28, 2001

Roots of E-Business

22

Client Server Systems

- Mainframe computing was the initial model:
 - Batch jobs
 - Systems optimized for efficient transaction processing
- Time-shared computing allowed easy access to the computing device at the cost of efficiency
- Distributing computing (of which client server is one form) divides the task among a number of machines:
 - Modular software components
 - Distributed data
 - Mainframe efficiency and time sharing convenience

September 28, 2001

Roots of E-Business

23

Smart Software

- Historically, software has been concerned with processing data stores
- Programs were designed to do simple tasks
 - Payroll checks
 - Inventory reports
- Data Base Management Systems (DBMS) were developed to help manage the data stores
- Programs, freed from managing the data, began to incorporate rules of increased complexity.
 - Rules could be defined without rewriting code
